Bisq Support for rBTC (Presentation)

An Entry to the Sovrython

Outline

Bisq and the RSK Sidechain

The Cost of Liquidity

- Bisq is a decentralised exchange.¹ We can use it to trade bitcoins for altcoins and fiat currencies.
- One side of every Bisq trade must involve bitcoins.
- We can use it as a decentralised on-ramp and off-ramp to the RSK sidechain.

¹https://bisq.network

- Alice now use Bisq to trade rBTC for BTC.
- Similarly Bob can now use Bisq to trade BTC for rBTC.
- Our pull request to the Bisq project was merged on 13th July.²

Bisq Support for rBTC

²https://github.com/bisq-network/bisq/pull/5611

You can see a video demonstrating Bisq Support for rBTC at:

https://youtu.be/dEkF6RHYx18?t=17

- Suppose you have BTC and rBTC, and you want to provide liquidity to the system.
- You can:
 - 1. Make offers on Bisq to buy and sell rBTC for BTC.
 - 2. Occassionally, peg-in to exchange BTC for rBTC.
 - 3. Occassionally, peg-out to exchange rBTC for BTC.

Make an Offer	Peg-In	Peg-Out
BSQ Trade Fee + BTC Mining Fee	BTC Mining Fee	RSK Mining Fee + BTC Mining Fee
11.45 BSQ/BTC + 239 vB tx	163 vB tx	44k gas + 1074 vB tx
\$14.15/BTC + \$2.36	\$1.61	\$0.09 + \$10.63

@ 3746 sat/BSQ, 30 sat/vB, 0.06 gwei, 33000 $\$ /BTC

Additionally,

- The party selling rBTC also needs to mine an additional transaction to send the rBTC.
- The taker of a Bisq offer needs to mine three additional Bitcoin transactions to complete the trade.

Also, a peg-out transaction currently pays approximately twice the fee market rate!
